

AirO Film[®] Standard

breathe eAsier

Air-O-Film[®] Standard is ideally suited to the following applications:

The most versatile pre-stretched ventilated film available

Product Overview

Because Air-O-Film[®] Standard is pre-stretched, it provides excellent performance. Specially formulated, it combines maximum elongation with performance, offering a high tensile strength. This ensures that even the heaviest loads will remain secure during transportation.

Less Material - Less Waste

Air-O-Film[®] Standard offers the smallest weight per metre of any film of its type. As well as being fully recycleable, it provides one other important benefit to the environment - it has been designed to ensure that loads can be secured using less material. That means you need fewer wraps, use less plastic and therefore save more money.

Manual or Machine Application

Air-O-Film[®] Standard is available in rolls that are suitable to both hand and semi-automatic machine application. No matter what your business or industry, we have a type of film that will compliment your operations.

High Visibility & Great Appearance

Air-O-Film[®] Standard is manufactured using the finest components which provide superb clarity and excellent pallet appearance. Wrapping a load in Air-O-Film[®] Standard sends a clear message to your customers - that you care about the quality of your product and are doing everything in your power to ensure that it arrives in the best possible condition.

The most versatile pre-stretched ventilated film available

Air-O-Film® Standard is perfect for solving problems when there is a build up of condensation or moisture. Such as...

Hot palletized products like soft drinks, beers, pasteurised goods, canned foods, pharmaceutical goods, pet foods, etc.

Chilled or Frozen Loads that require fast cooling after palletization, such as meat, fish, frozen snacks, etc.

Advantages of Air-O-Film® Standard

USE LESS - SAVE MORE

Due to the unique design of Air-O-Film® Standard you need less material to wrap a load when compared to alternative solutions. Not only does this minimize the packaging cost, it has the added benefit of being more environmentally friendly.

EXCELLENT PALLET PERFORMANCE

The superb holding force of Air-O-Film® Standard in combination with its impressive lateral strength ensures perfect pallet stabilization without damaging the carton boxes or other packed materials.

INCREASED GRIP

Air-O-Film® Standard is made using a carefully controlled formula of plastic compounds. These give the film many individual properties, including a powerful ability to grip the load.

NO REDUCTION IN WIDTH

Regular stretch film and knitted netting reduce in width after stretching. Air-O-Film® Standard retains its width after stretching, saving you time, material and cost.

PREVENT CONDENSATION

If condensation is allowed to build up within a load then there can be many problems. It may become unstable and fall over, it might damage the outer packaging, thereby spoiling the delivery or, in extreme cases, the product itself may be damaged and rejected.

FORKLIFT FRIENDLY

Like netting, the reinforcing strips on competitive products can often come away from the base film and become entangled within the wheels and bearings of forklifts. The design of Air-O-Film® Standard prevents this from happening.
